

SenesTech to Ring Nasdaq Stock Market Closing Bell on January 20th

FLAGSTAFF, Ariz. and NEW YORK, Jan. 19, 2017 /PRNewswire/ -- SenesTech, Inc. (NASDAQ: SNES), a developer of proprietary technologies for managing animal pest populations through fertility control, will celebrate its 2016 initial public offering ("IPO") by ringing the Nasdaq Stock Market closing bell in New York City on Friday, January 20th. The company began trading on the Nasdaq on December 8, 2016.

SenesTech co-founders Dr. Loretta Mayer and Dr. Cheryl Dyer will be joined by several members of the SenesTech team as they ring the closing bell at 4:00pm ET (2:00pm AZ time). Commencing around 3:45pm ET, a live stream of the Nasdaq Closing Bell will be available at:

<https://new.livestream.com/nasdaq/live> or <http://www.nasdaq.com/about/marketsitetowervideo.aspx>.

"The listing of our shares on the Nasdaq was a tremendous milestone for SenesTech's employees and early investors, and we are honored to ring the Nasdaq closing bell in celebration of this achievement," said Dr. Loretta P. Mayer, Chair, CEO and co-founder of SenesTech.

Dr. Mayer continued, "SenesTech's revolutionary technology for animal pest control changes the age-old kill and kill again practice by using cutting-edge science to get to the root cause of the problem: reproduction. Our solution aims to improve the quality of human life by reducing the chances of poisoned children and pets, reducing the spread of disease, getting more of the food we grow to our tables, and reducing infrastructure damage by rats. We aim to do this by addressing the pest population in a more humane, sustainable, non lethal, effective and environmentally neutral, manner. We look forward to the opportunity of furthering our mission in the years to come."

About SenesTech

SenesTech has developed an innovative technology for managing animal pest populations through fertility control as opposed to a lethal approach.

The Company's first fertility control product, ContraPest[®], will be marketed for use initially in controlling rat infestations. ContraPest's novel technology and approach targets the reproductive capabilities of both sexes, inducing egg loss in female rodents and impairing sperm development in males. Using proprietary bait stations, ContraPest is dispensed in a highly palatable liquid formulation that promotes sustained consumption by rodent communities. ContraPest is designed, formulated and dispensed to be safe for handlers and non-target species such as wildlife, livestock and pets, in a biodegradable product. In contrast, the historical approach to managing rodent pest populations, rodenticides, carries a high risk of environmental contamination and the poisoning of non-target animals, pets and children.

We believe our non-lethal approach, targeting reproduction, is more humane, less harmful to the environment, and more effective in providing a sustainable solution to pest infestations than traditional lethal pest management methods. There is currently no other non-lethal fertility control product approved by the Food and Drug Administration (FDA), or the Environmental Protection Agency (EPA), for the management of rodent populations. We believe ContraPest[®] will establish a new paradigm in rodent control, resulting in improved performance in rodent control over rodenticides, without the negative environmental effects of rodenticides.
